Experience

DataRobot Oct 2025 – Sep 2026
Senior Software Engineer | Python, MongoDB, Harness, Kubernetes, DataBricks *Remote*

- Delivered DataRobot's foundational Files API and fsspec-compatible Python SDK for storing and working with unstructured data, now underpinning hundreds of customer apps, RAG & MCP services, and platform AI workloads.
- Led technical design and cross-team delivery of DataRobot's Bring-Your-Own-Connector platform initiative, authoring tech specification and PRD offering customers a self-service way to integrate custom data sources.
- Acted as a Forward Deployed Engineer embedded with an oil & gas customer building a production-ready AI solution with DataRobot app templates, FastAPI, and React, saving millions of dollars by optimizing well lease tracking.
- Modernized platform Flask APIs and Python SDK, authored technical documentation, triaged and remediated security CVEs, provided on-call support, and onboarded new engineers.

Royal Bank of Canada July 2023 – Oct 2025
Senior Full Stack Developer | Python, Airflow, Spark, Java, Spring-boot, Angular, SQL *Toronto, ON*

- Developed and maintained features for critical marketing microservice ecosystem of Java Spring Boot and Python FastAPI Angular applications used to create and track marketing offers sent to 16+ million clients daily.
- Automated sequencing of marketing offers across 40+ distribution channels–including email, dm, web banners and advisor systems–by building an orchestration framework with Airflow, PySpark and Postgres, saving 250+ hours annually.
- Built and maintained scalable ETL pipelines using Pyspark, Airflow and AWS Glue to securely transfer 100+ TB of client data from on-prem storage to AWS S3.
- Led cloud migration of mission-critical microservices from PaaS Pivotal Cloud Foundry to Red Hat OpenShift with 0% downtime and seamless user experience.

Affirm May – Aug 2022
Software Engineering Intern | Python, Spark, React, Kubernetes, AWS *Remote*

- Automated encryption-key rotation for investor document transmission by building a self-service portal with Airflow and React, reducing key-rotation time from ~6 hours to 5 minutes.
- Ported Python ETL workflows to Spark on Kubernetes–doubling data-processing throughput and reducing pipeline costs by 30% through improved parallelization and efficiencies.

Skills

- **Languages:** Python, Java, JavaScript, Typescript, HTML, CSS, Bash, C#, Haskell, SQL
- **Frameworks:** React, Angular, Spring Boot, FastAPI, Flask, Node.js
- **Tools/Technologies:** Airflow, PySpark, Spark, Docker, Git, MongoDB, Postgres, GitHub Actions, Claude Code

Projects

QTime (QueueTime) | React Native, Python, Firebase, Expo, Github Actions, AWS

- Led development and launch of "QTime", a cross-platform React Native mobile app used by students to monitor wait times or campus services in real time; developed with Python Flask, Firebase and leveraging Bluetooth low-energy technology.
- Automated CI/CD with pipelines leveraging GitHub Actions, Docker and Expo to host on AWS.

Education

B.A.Sc. Honors, Computer Science Sep 2018 - Apr 2023
McMaster University

- Dean & Provost's Honor Roll
- Relevant coursework: Data Structures & Algorithms, Principles of Programming, Discrete Mathematics
